EDUCATION

ABES Engineering College

Ghaziabad, India

B.Tech in Computer Science and Engineering — CGPA: 7.7/10

Expected July 2027

— **Coursework:** DSA, OOP, Distributed Systems, System Design, OS, DBMS, Computer Networks, Cloud Computing

WORK EXPERIENCE

Software Development Intern

April 2026 – May 2026

Adventrig

Remote

- Owned end-to-end frontend development for a live healthcare platform used across South Carolina — built modular, responsive interfaces that worked seamlessly across devices.
- Tracked down tricky rendering bugs through careful root-cause analysis and wired up backend APIs to get real data flowing into the UI.
- Shipped iterative improvements in a fast-paced Agile team, picking up tasks, attending standups, and meeting sprint deadlines consistently.

PROJECTS

ByteCrush – File Compression Toolkit | C++, STL, Multithreading, OOP, Automated Testing | GitHub

- Built a multi-algorithm file compressor (Huffman, LZW, RLE) from scratch in C++ using clean OOP design; cuts file sizes by **50–60%** on multi-GB inputs without breaking a sweat.
- Parallelised the pipeline with multithreading and clocked a **2.5× speed improvement** over the single-threaded version — verified through rigorous benchmarking.
- Wrote a thorough test suite covering nasty edge cases (empty files, max-entropy data, boundaries) and built a regression harness so nothing breaks silently.

FeedbackLens – LLM Evaluation Pipeline | Python, LangChain, FAISS, FastAPI, Pytest | GitHub

- Designed an automated eval system that uses GPT-4o as a judge to score RAG outputs on faithfulness, relevance, and conciseness — hit **87% retrieval accuracy** on a 500-query benchmark.
- Wrote parameterised Pytest suites for recall, prompt regression, and API contracts; plugged results into a live SQLite + Streamlit dashboard so quality issues surface instantly.
- Treated prompt changes like code changes — tracked regressions across versions so the pipeline never quietly got worse.

Smart Tourist Safety System | ML, Blockchain, Geofencing, Flutter, MongoDB | GitHub

- Architected a fault-tolerant distributed system that fires real-time SOS alerts the moment someone crosses a geofence — validated sub-second latency under heavy concurrent load.
- Anchored incident records on-chain for tamper-proof logging and automated E-FIR filing; ran full integration tests across every distributed component before going live.

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, SQL, Bash

Systems & Core CS: Multithreading, Memory Management, Distributed Systems, Service-Oriented Architecture, REST APIs, GDB, Linux

Cloud & ML: AWS (Bedrock, Lambda, S3), GCP (BigQuery, Kubernetes), PyTorch, Scikit-learn, NumPy, Pandas, BERT

Tools & Methods: Git, Docker, CI/CD Pipelines, Pytest, Postman, Agile/Scrum, OOP Design, Test-Driven Development

AWARDS & ACHIEVEMENTS

Competitive Programming: LeetCode 1522 (450+ problems); CodeChef 1616, **Global Rank 74** (Starters 211);

Google The Big Code 2026 – **Top 15,000 nationally**

Competitions: Tata Imagination Challenge 2024 – **Top 2.27%** of 312K+ participants | Ardethon Hackathon – **3rd Place** (100+ teams) | ParanoX 2.0 – Top 40 of 20K+ participants | Naukri Young Turks AIR 1391 (500K+ participants)

Cloud: Google Cloud Arcade **Legend** – GCP, BigQuery, Kubernetes, AI/ML, Cloud Functions

CERTIFICATIONS

Oracle Cloud Infrastructure Generative AI Professional (2025) | Tata GenAI Data Analytics (2025) | Linux Unhatched – Cisco (2025)
